

MODEL N°
ESKER CHAIR

Laid-back deep in its bones, the Esker Chair seeks lounges and people taking it slow - even if just for a moment to finish that note to a friend. A cousin to our Bolster Chair, we make Esker in one continuous and wasteless 3D print using resins upcycled from plant waste. Durable indoors or out, biodegradable, and recyclable, you can spec Esker in a variety of colors to fit your designed environment.

dimensions

Chair	width	24"
	height	29.5"
	depth	28.5"
	seat height	13.5"
Ottoman	width	24"
	height	13.5"
	depth	20.25"

materials

Bio Resin Black, White, Woodprint, Desert Clay, Seaglass, Fern

Bio Resin:

care

Care for plant resin 3D printed components: Keep the edges of your resin surfaces clean by using a synthetic bristle brush with mild cleaning soaps, such as diluted dish soap or general non-abrasive cleaners. Avoid bleach, ammonia, and other harsh or abrasive cleaners which may damage the texture of the surface.

sustainability

From FSC® certified hardwoods, to plant-based polymers, to GOLS-certified latex, we examine every product for sustainability, quality, and performance. We strive to source our materials locally. Additive manufacturing processes like 3D printing let us produce each piece to order. Limiting inventory minimizes our carbon footprint and also maximizes our product quality. Only the products identified as such in this document are FSC®-certified. FSC® C125400/SCS-COC-007184

customization

With the use of our advanced manufacturing processes, our customers have the freedom to customize their order. From sizing, material choice, fabric color and finish, we can truly design your living space to the customers ideal vision. There is no minimum order quantity as we are aiming to reach a diverse range of customers, from big companies to small homes.
